

Linux Cheat Sheet

| Hallmarks of Linux | |
|--------------------------------|---|
| <i>Multiuser</i> | Simultaneous access by multiple users |
| <i>Preemptive Multitasking</i> | Timesharing |
| <i>Interactive</i> | User interface is handled in real time |
| <i>Portable (written in C)</i> | Linux can be recompiled for any processor |
| <i>Text-based</i> | Linux can be used exclusively from terminal |
| <i>Free</i> | Many distributions of Linux are available free of charge and are open source. |

| Linux History | |
|---------------|---|
| 1967 | Ken Thompson develops early version of UNIX |
| 1972 | Dennis Ritchie writes the first C compiler |
| 1973 | Thompson and Ritchie port UNIX to C |
| 1983 | Thompson and Ritchie win a Turing Award for work on UNIX |
| 1991 | Linus Torvalds begins work on a free and open source version of UNIX called Linux |

| Linux Philosophy | |
|----------------------|---|
| <i>Communication</i> | Problems solved by chaining smaller programs together |
| <i>Concurrency</i> | Processes can clone themselves and run simultaneously |
| <i>Uniform I/O</i> | Uniformity in I/O aids in chaining programs |

| Linux Essentials | |
|------------------------|---|
| <i>General Syntax</i> | <code><cmd> <options> <args></code> |
| <i>Change password</i> | Use passwd command |
| <i>Logout</i> | Ctrl-D or exit |
| <i>Getting help</i> | <code>man <command></code> |

| Files and Directories in Linux | |
|-------------------------------------|--|
| <code>cp <s> <d></code> | Copy file from <s> to <d> |
| <code>mv <s> <d></code> | Moves file from <s> to <d> |
| <code>mkdir <dir></code> | Makes directory <dir> |
| <code>rm <file(s)></code> | Permanently deletes <file(s)> |
| <code>rm -r <d></code> | Permanently deletes directory <d> |
| <code>cd <dir></code> | Change directory to <dir> |
| <code>ls</code> | List contents of current directory |
| <code>ls -l</code> | List contents of current directory with file permissions |

| I/O Redirection | |
|--------------------------|---|
| <code><</code> | Redirects stdin (ex. <code>cat < f.txt</code>) |
| <code><<</code> | Redirects stdin to HERE files |
| <code>></code> | Redirects stdout (overwrites) (ex. <code>cat < f.txt > cpy.txt</code>) |
| <code>2>&1</code> | Redirects stderr to stdout |
| <code>>></code> | Redirects stdout (appends) (ex. <code>cat < app.c >> app2.c</code>) |
| <code> </code> | Pipes stdout to another program (ex. <code>man diff grep 'space'</code>) |

| Useful Linux Utilities | |
|------------------------|---|
| <code>cat</code> | Displays files |
| <code>echo</code> | Displays a line of text |
| <code>vim</code> | Terminal based text editor |
| <code>grep</code> | Searches input for a given pattern |
| <code>less</code> | Displays file (good for viewing large text files) |
| <code>find</code> | Search for files in a directory |
| <code>indent</code> | Auto-formats C code (indentation and spacing) |
| <code>diff</code> | Prints line-by-line differences between two files to stdout |
| <code>tar</code> | Archiving utility |
| <code>gcc</code> | Compiles C code |
| <code>g++</code> | Compiles C++ code |

| Examples of Useful Linux Commands | |
|--|--|
| <code>grep -r 'printf' .</code> | Search all files in working directory (and all subdirectories) for the word 'printf' |
| <code>grep 'printf' HelloWorld.c</code> | Print all lines in HelloWorld.c that contain the word 'printf' |
| <code>diff -w file1 file2</code> | Print differences between file1 and file2 to stdout, ignoring whitespace |
| <code>find /etc -name 'hosts'</code> | Find all files in etc directory named 'hosts' |
| <code>indent -linux file1.c</code> | Format file1.c such that the formatting follows the Linux kernel standard |
| <code>tar cvf hw7.tar file1.c file2.c</code> | Puts file1.c and file2.c into hw7.tar |
| <code>tar xvf hw7.tar</code> | Extract hw7.tar to the current directory |
